- Basic PHP
- MySQL

Projects

- **QR Code generator**
It is a Java based project. We can convert any text into a QR code. It is useful in shops or restaurant where the owner can make a QR code of their website from the text given and customer can scan the QR code which redirect it to their portal.
- **E-Commerce chatbot**
Chatbot is most widely used for customer support. This system provide solutions to the query of user without any person being involved. It provides 24/7 customer support regarding our Ecommerce website.
